Maximising real value from your IT infrastructure

Wireless Networking

Wireless networks are all around us. We use them in coffee shops, on trains and in our homes. We all know there are good and bad ones. If the wireless network is poor in a coffee shop this can be an annoyance but if that same performance is repeated in our workplace the implications can be far more than just annoying.

Our Solution, options and approach

Atlas are able to provide high quality, reliable, secure, high performance enterprise class networking solutions that allow a workforce to use mobile devices and laptops without suffering poor wireless connections. This enables new ways of working and can also increase employee satisfaction and productivity.

Using an enterprise class networking product allows advance features such as centralised management of devices, access point hopping, traffic analysis and performance monitoring. Utilising the latest wireless technology also allows high speed mobile devices to be used at their full potential.

Our wireless networking offers:

- Enterprise class solution
- High speed reliable Wi-Fi connectivity to mobile devices
- Centralised management of access points
- Smart Wi-Fi meshing
- High density mobile environments
- Replace ineffective current equipment

Best Practice from the Atlas Business Group

Atlas is ISO27001 and ISO9001 registered. We have been building, implementing and managing reliable, available, scalable and secure environments for many customers over the years.

By using our UK based data centre and managed network we are able to provide a comprehensive point or end to end solution if required. We have extensive experience across a wide range of computing environments include networks, servers, data centres, security, cloud hosting and storage provision.

Atlas has the ability to architect and build a comprehensive network infrastructure that reliably and securely provides the foundation to enable a mobile empowered workforce. We have worked with customers to introduce a mobile environment within an existing computing environment.

Deliverables

Atlas can provide a number of solution based on your organisations' specific requirements:

- Single onsite enterprise class Wi-Fi access points
- Multiple access points with local management
- Multiple access points with remote management
- High performance mobile Wi-Fi providing real-time streaming video for up to 500 clients

Business values and benefits

Nothing affects employee performance more than a slow network within the workplace. Many organisations are providing employees with a network that s many times slower that what they are using at home.

By using a Wi-Fi powered network from Atlas the employee experience can be dramatically changed for the better. Improved performance and reliability makes sure employees get data delivered to the mobile device when they need it.
